A Product Of

CyLock MFA

An Advanced Out-of-Band Multi-factor Authentication (MFA) platform which provides strong authentication and authorization mechanism using end users mobile devices that defeats modern cyber threats like Man-in-the-Middle, Phishing and SIM swap fraud and provides real-time protection to user identity and data.

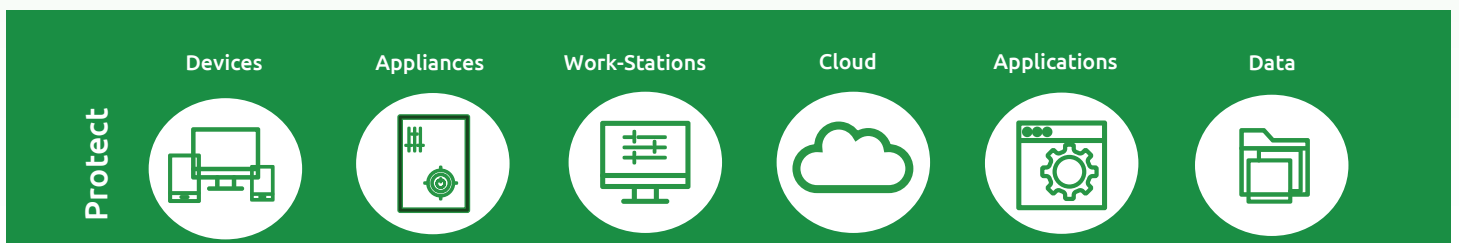

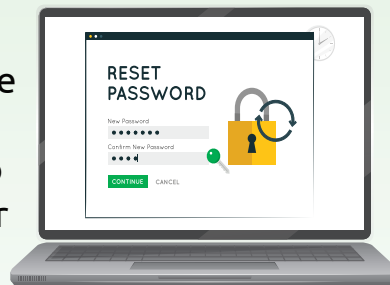

CyLock SSO

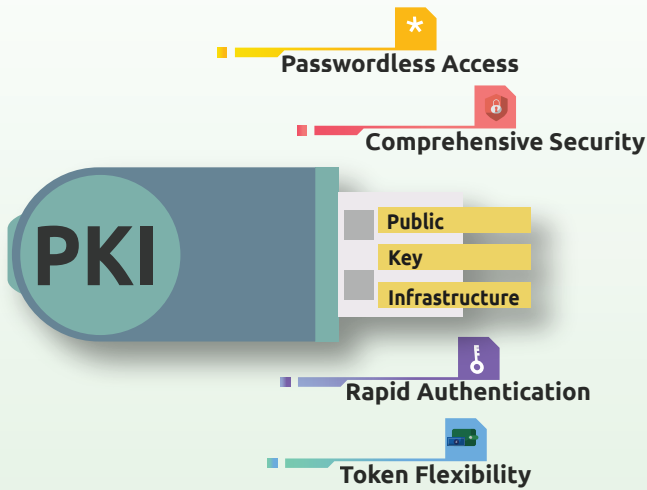

An Enterprise Single Sign-On (SSO) solution that enables users a seamless, secure access to any on-premises / cloud web apps with a single credential thereby eliminating the need for remembering multiple passwords. Go Passwordless with QR authentication or WebAuthn for a frictionless login experience.

CyLock SSPR

A Password Self-Service Management solution with integrated MFA, empowers end users with a secure self-service portal to manage their Directory accounts by allowing them to change/reset password and unlock their accounts on their own without help.

CyLock PKI

A Comprehensive modern, secure PKI solution which enables customers to carry out seamless authentication to web applications, secure network logon, online banking, digitally sign transactions and documents online. Using USB PKI tokens, we offer strong multi-factor authentication thereby enabling organizations to address their PKI security needs.

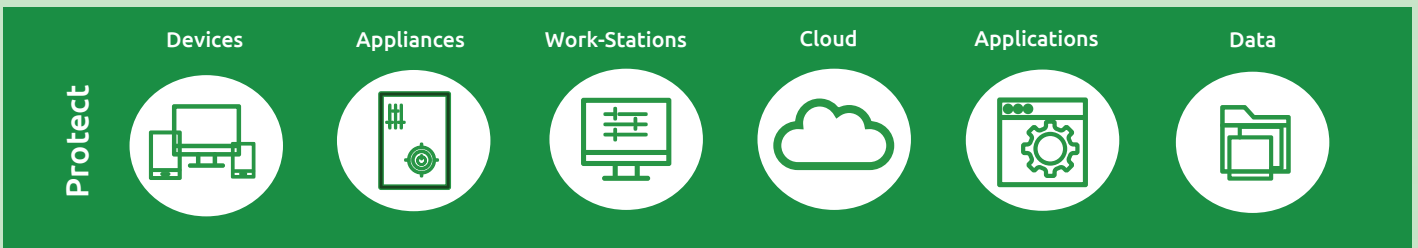

CyGrID

CyGrID offers secure and cost-effective 2FA, enabling users to generate one-time passwords without the need for hardware tokens or smartphones. Users set a GRID PIN and X-Digit value for authentication.

		X – Digit Value									
		4	0	7	3	6	9	5	8	1	2
